Senior Frontend Engineer with 8+ years of experience in React, Next.js, and Angular. Led a 20+ engineer team at Today (an enterprise platform like Microsoft Teams) to deliver scalable solutions that increased user engagement by 30%. Skilled in Micro-Frontends, CI/CD, Docker, and Agile practices, with a strong focus on Clean Architecture, mentorship, and reusable design systems.

### EXPERIENCE

#### Today, Isfahan— Senior Front-End Developer

Apr 2023 - PRESENT

Overhauled AI-driven messaging, calendar, and planning tools that streamlined workflows, reducing time-to-decision by 40% for key technical initiatives, and increased project launch velocity.

- Championed professional development initiatives for a team comprising more than 20 software engineers, directly contributing to three successful project launches ahead of schedule through strategic coaching sessions focused on essential technologies.
- Deployed micro-frontends, integrated the today-kit package, and streamlined workflows for 40+ engineers.
- Established 20+ CI/CD pipelines and Dockerized applications, optimizing deployment efficiency.
- Conducted code reviews to ensure best practices and high-quality delivery.
- Spearheaded development of enterprise messaging platform, integrating real-time chat and ticketing; decreased internal email volume by 60% and accelerated project turnaround time by 35% within six months of launch.

#### Kasra, Isfahan— Front-End Developer

Apr 2018 - May 2023 (5+ years)

Kasra, a leading provider of workforce management solutions, serves 3,000+ clients and leverages 24 years of expertise to deliver innovative software.

- Engineered 10+ responsive web applications and admin dashboards using React/Redux and Angular, incorporating 100+ reusable components alongside valuable development tools like plugins, mixins, and directives.
- Spearheaded improvements in development, code review, release, and bug-fixing methodologies within the team, leveraging Scrum/agile best practices for over 1000+ hours.
- Engineered enhancements to the GEO-fence Module for the Attendance Application, implementing intricate map customizations using Leaflet and Google Maps, resulting in a 30% increase in user engagement for location-based features.
